Introduction

The WISE-4250 series is a wireless IoT solution designed for industrial applications. This Ethernet-based device is compatible with various I/O and sensors and integrates data acquisition, processing, and publishing functions. It supports real-time P2P communication between devices, enabling edge intelligence without a central controller, making it ideal for applications requiring rapid response and distributed control. Furthermore, a watchdog timer and smart roaming ensure stable device operation in any environment. The WISE-4250 also prioritizes data security, with a data logger, data recovery function, WPA3/TLS1.3 encryption, and IP whitelisting to prevent data loss and unauthorized access. Best of all, it supports MQTT, Modbus, and RESTful APIs, enabling you to easily publish data to various cloud platforms for data-driven decision-making.

Features

IEEE 802.11 a/b/g/n/ac 2.4/5GHz Wi-Fi with AP Mode

The Wi-Fi interface is easily integrated with wired or wireless Ethernet devices, users only need to add a wireless router or AP to extend existing Ethernet network to wireless. The limited AP mode enables the WISE-4250 to be accessed via other Wi-Fi devices directly as an AP.

Smart Roaming

This function help WISE-4250 series communicate and connect to surrounding AP much more flexibly and effectively to prevent long disconnection idle time and setup more stable network. 802.11 k/v/r are also supported to help on better signal strength management in advance and faster connection time.

Connect to AP1 — move — Connect to AP2

Data Logger and Recovery

The WISE-4250 can periodically log over 10,000 data points with timestamps and system logs at 100ms intervals, both during normal operation and wireless disconnections. Notably, it can record at a faster 50ms interval during signal state changes. Once the memory is full, users can choose to overwrite old data in a ring buffer or stop the logging function. This ensures no data loss and facilitates comprehensive data tracking.

Security Features

☐ **X.509 Certificate**

Digital Certificate

☐ **WPA2 & WPA3 Personal/Enterprise**

Protect Wi-Fi networks from attacks
- WPA3 uses a longer 192-bit key, further enhancing security.

☐ **TLS1.3 encryption**

Cryptographic Protocol
- Secures data transmission between clients and the server
- Supports **EAP-PEAP** and **EAP-TLS** security types

☐ **AES-128 encrypted**

- UDP based AES-128 (advanced encryption standard) encrypted wireless **P2P** (Peer to Peer) function

Peer to Peer (P2P)

WISE-4250 supports Peer-to-Peer communication for direct device-to-device control without relying on SCADA or PLC systems, enabling real-time, decentralized, and low-latency responses.

Up to 16 modules can be linked. Signals can be sent periodically or triggered by input status changes (e.g., DI/AI input triggering DO output).

Supports two modes:

- **Basic Mode:** Fixed 1-to-1 channel mapping across modules; ideal for simple control.
- **Advanced Mode:** Flexible channel mapping for complex signal routing.

Communication uses UDP and supports AES-128 encryption for enhanced security.
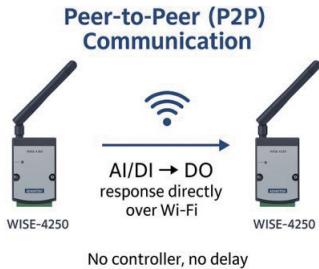

RESTful Web Service with Security Socket

WISE-4250 also supports IoT communication protocol, RESTful web service. Data can be polled or even be pushed automatically from the WISE-4250 when the I/O status is changed. The I/O status can be retrieved over the web using JSON. The WISE-4250 also supports HTTPS which has security that can be used in a Wide Area Network (WAN).

Data Storage with RTC Time Stamp

Public and Private Cloud Connectivity
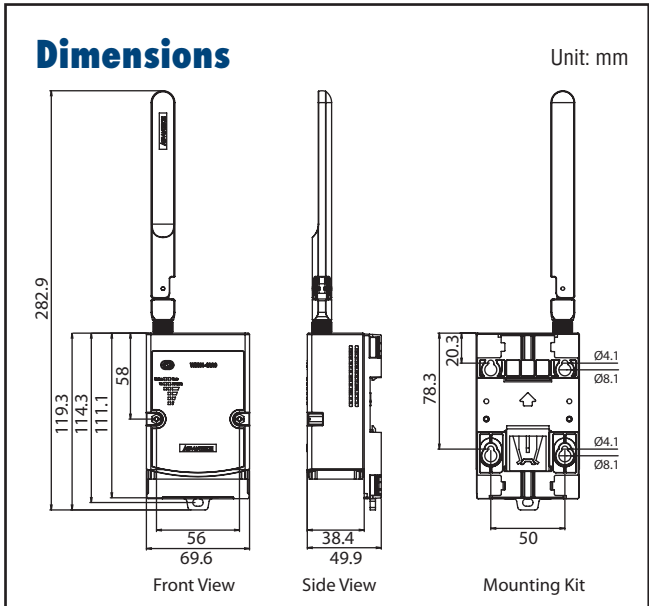

HTML5 Web Configuration Interface

All the configuration interfaces are applied in web service, and the web pages are based on HTML5, so users can configure the WISE-4250 without the limitation of OS/devices. You can use your mobile phone or tablet to directly configure the WISE-4250.

※ It is recommended to use Microsoft Edge browser for a better user experience.
